[OCT 01] [Ontario Influenza Bulletin: Surveillance Week 38 \(Sep 20 – Sep 26\)](#)

For the surveillance period of September 20 to September 26, 2009 :

- Overall, influenza activity in Ontario was similar compared to the previous week.
- More patients reporting influenza-like symptoms consulted sentinel physicians this week than the previous week.
- The rate of influenza-like illness (ILI) in patients seen by sentinel physicians was above the average rate expected at this time of year.
- Health units reported either sporadic activity or no influenza activity for the current reporting week.
- There are 4,089 confirmed cases of H1N1 flu virus reported through the integrated Public Health System (iPHIS) as of September 26, 2009.

As of September 30 :

- 24 deaths have been reported among confirmed H1N1 cases.
- 14 people who have the H1N1 flu virus were in hospital as of 8:30 a.m. on September 30, a number of whom have underlying medical conditions. 365 other people have been hospitalized and have since been discharged.
- A larger number of hospitalized cases were reported this week compared to last week. No new deaths among cases were reported this week.

[OCT 06] [Mexico Hosts High Level North American Meeting in Response to 2009 Influenza A \(H1N1\)](#)

The Government of Mexico today hosted a meeting with senior officials from Canada and the United States as part of ongoing North American efforts to address the challenges posed by the 2009 Influenza A(H1N1). The objectives of the meeting were for the three countries to take stock of efforts to date, and to continue sharing lessons learned and strategies to further prepare for and respond to the 2009 Influenza A(H1N1) virus.

[OCT 06] [Deaths Associated with H1N1 flu virus in Canada](#) [as of Oct 6]

No deaths reported since last update, 78 deaths in total.

[OCT 05] [FluWatch findings for Week 36 \(week ending Sep 26\)](#)

- The overall influenza activity increased for a second consecutive week, but still relatively low. The national ILI consultation rate remained similar to the previous week but was slightly above the expected range for this time of the year. The proportion of positive tests and the number of regions with localized or widespread activity were also higher than the previous week.
- BC had a particularly high influenza activity this week with almost 20% of positive influenza tests and eleven influenza outbreaks. NT was also affected with 2 outbreaks in schools and 3 new hospitalized cases due to Pandemic (H1N1) 2009.
- This week, 99.1% of the positive influenza A subtyped specimens were Pandemic (H1N1) 2009.
- The intensity of Pandemic (H1N1) 2009 in the population was low with twelve hospitalizations and no deaths reported this week. Hospitalized cases were reported from BC, SK, ON, QC and NT. As of September 26, 2009, a total of 1,479 hospitalized cases including 292 cases admitted to an intensive care unit (ICU) and 153 cases required ventilation as well as 78 deaths had been reported since the beginning of the pandemic.
- The influenza activity increased in the U.S. for a fourth consecutive week.
- The number of confirmed cases in Mexico reached higher levels in September than the Pandemic (H1N1) 2009 peak in April.

- [OCT 02] [Weekly FluView Map and Surveillance Report for Week Ending September 26, 2009](#)
 - During week 38 (September 20-26, 2009), influenza activity remained elevated in the U.S
 - 2,126 (22.8%) specimens tested by U.S. World Health Organization (WHO) and National Respiratory and Enteric Virus Surveillance System (NREVSS) collaborating laboratories and reported to CDC/Influenza Division were positive for influenza.
 - 99% of all subtyped influenza A viruses being reported to CDC were 2009 influenza A (H1N1) viruses.
 - The proportion of deaths attributed to pneumonia and influenza (P&I) was below the epidemic threshold.
 - Eleven influenza-associated pediatric deaths were reported and all eleven were associated with 2009 influenza A (H1N1) virus infection.
 - The proportion of outpatient visits for influenza-like illness (ILI) was above the national baseline. Regions 2 through 10 reported ILI above region-specific baseline levels; only Region 1 was below its region-specific baseline.
 - Twenty-seven states reported geographically widespread influenza activity, Guam and 18 states reported regional influenza activity, two states, the District of Columbia, and Puerto Rico reported local influenza activity, one state reported sporadic influenza activity, and the U.S. Virgin Islands and two states did not report.
 - The 2009-10 influenza season officially begins October 4, 2009.

[OCT 02] [2009 H1N1 Flu: Situation Update](#)

Center for Infectious Disease Research and Policy

- [OCT 06] [States to get first injectable H1N1 vaccine doses next week](#)
Lisa Schnirring ■ Staff Writer (CIDRAP News) – States will begin receiving their first injectable doses of the pandemic H1N1 vaccine next week and can look forward to plentiful and steady supplies over the next 2 weeks, federal officials said today.
- [OCT 06] [Cuba asks international help getting vaccine](#)
The Cuban government has asked the World Health Organization (WHO) and the Pan American Health Organization to help the country acquire H1N1 vaccine, saying the formula is too expensive for it to afford on its own. The island nation has officially recorded 468 cases of H1N1 flu but no deaths since the pandemic began.
- [OCT 06] [Tunisia prohibits hajj pilgrimages](#)
Though some Muslim countries have taken measures to limit the number of people making the hajj pilgrimage to curb the spread of pandemic flu, Tunisia today became the first to bar its citizens from making the trip, Reuters reported today. The country's religious affairs ministry said a vaccine would not arrive in time to vaccinate pilgrims for November travel. About 10,000 Tunisians typically make the trip every year.
- [OCT 06] [Study shows regional variance in pandemic response](#)
In the first several days after the WHO declared pandemic level 5 on Apr 29, Malaysians showed greater concern than their European counterparts but also more preparedness steps, according to a study released today. Forty-two percent of Malaysians and only 5% of Europeans said they were "very concerned" about the outbreak. Malaysians also ranked higher in reduced public transport use (48% to 22%), flight cancellations (56 % to 17%), and intent to buy protective equipment (41% to 15%).
- [OCT 05] [WHO will not act on unpublished Canadian data](#)
A teleconference convened Friday by the WHO to assess the validity of unpublished data linking seasonal flu vaccine and development of H1N1 flu did not find the association persuasive, according to the Canadian Press. The data by Canadian researchers, contained in an article that is in press at an unnamed medical journal but apparently has circulated widely, has led to almost universal scaling back of seasonal flu shot campaigns in Canada
- [OCT 05] [US health workers get first pandemic flu vaccine doses](#)
The nation's first doses of the pandemic H1N1 vaccine were administered today, mainly to a limited group of healthcare workers and emergency medical service workers, while some physicians' offices fielded calls about when the vaccine would be more widely available.

- [OCT 05] [UN officials call for more donated vaccine](#)
Though some vaccine companies and affluent nations have already donated supplies of pandemic flu vaccine to developing nations, more is needed, officials from the World Health Organization (WHO) and the United Nations said yesterday, according to a Reuters report.
- [OCT 05] [NYC's schools hold pandemic vaccine drill](#)
New York City health and education department will hold vaccination clinics at five of the city's schools next week to prepare for school based pandemic H1N1 vaccine clinics. Parents will start receive consent forms to sign if they want their children to receive the vaccine. The city said it will begin an 8-week school-based vaccination effort in late October at the elementary schools. In November and December vaccine clinics will be held at middle schools and high schools on weekends.

Health Protection Agency (UK)

- [OCT 06] [Weekly International Summary](#) [taken from WHO data]
- [OCT 01] [HPA Weekly National Influenza Report](#) 01 October 2009 (Week 40)
- [OCT 01] [HPA weekly pandemic flu media update](#)
- Rates of flu-like illness and related activity have shown further increases in England. The largest rises in England have been seen in the North West and Yorkshire and Humber.
 - The flu-like illness rate in England from the Royal College of General Practitioners (RCGP) scheme increased to 22.2 per 100,000 in week 39. Most age groups saw an increase.
 - This week, the antiviral collection numbers in the National Pandemic Flu Service have continued to increase and this has been seen in all age groups. The largest increase was in the 25-44 year olds (8,796 in week 38 to 12,055 in week 39).
 - Interpretation of data to produce estimates on the number of new cases continues to be subject to a considerable amount of uncertainty. HPA modelling gives an estimate of 14,000 new cases in England last week (range 7,000 to 30,000). This is a 50 per cent rise since the previous week.
This estimate incorporates data from National Pandemic Flu Service and GP consultations.

- Globally, activity is generally increasing in the northern hemisphere, is variable in the tropical regions and has largely returned to baseline in the southern hemisphere.

[OCT 02] [Pandemic \(H1N1\) 2009 - update 68](#)

- As of 27 September 2009, worldwide there have been more than 340,000 laboratory confirmed cases of pandemic influenza H1N1 2009 and over 4100 deaths reported to WHO.
- All pandemic H1N1 2009 influenza viruses analyzed to date have been antigenically and genetically similar to A/California/7/2009-like pandemic H1N1 2009 virus.
- Transmission of influenza virus and rates of influenza-like-illness (ILI) continue to increase in the temperate regions of the northern hemisphere. In North America, influenza transmission is geographically widespread and continues to increase. Levels of ILI have continued to increase and remain above the seasonal baseline for the past 4 weeks in most regions of the United States. In Europe and Central and Western Asia, although overall influenza activity remains low an increase in transmission has been noted in a number of countries and continues to intensify in others. *[For the complete update on countries, please follow the link above]*

[ARCHIVED] [Older WHO Updates](#)

Pan-American Health Organization (PAHO)

[OCT 02] [Regional Update. Pandemic \(H1N1\) 2009. \(published on October 2, 2009\)](#)

Summary of the situation reported during the last week

- 8,869 new confirmed cases (146,016 cumulative cases in 35 countries).
 - 158 new confirmed deaths (3,292 confirmed deaths in 25 countries).
 - 98.9% of the influenza A viruses that were subtyped were pandemic (H1N1) 2009.
 - South America experienced low intensity and a decrease or unchanged trend
 - North America experienced an increasing trend despite low intensity of acute respiratory disease everywhere except for Mexico
 - Central America experienced low or moderate intensity and a decreasing trend.
 - The Caribbean experienced low or moderate intensity and an increasing trend.
- Number of confirmed cases and deaths

- As of 2nd October 2009, a total of 146,106 confirmed cases have been reported in all 35 countries in the Americas Region.
- A total of 3,292 deaths have been reported among the confirmed cases in 25 countries of the Region.

[ARCHIVED] [PAHO Influenza A \(H1N1\) Portal](#)

Australia and New Zealand

[OCT 06] [Australia National H1N1 Influenza 09 Update](#)

Note: Jurisdictions are reporting data once per week on various days. All figures will be updated on Fridays.

- At noon today Australia has 36,927 confirmed cases of pandemic (H1N1) 2009.
- As of 6 October, 183 people have died. Of these deaths, four were pregnant women and 24* (13.11%) were Indigenous.
- **The reporting of *current hospitalisations* has been replaced by weekly reporting of *new hospitalisations***, as States and Territories have moved from reporting data daily to reporting weekly.
- There have been 36 new hospitalisations for the past week around Australia with pandemic (H1N1) 2009. Of these, 1 of the people in hospital is Indigenous Australian. There have been 10 people admitted to Intensive Care Units this week
- The total number of hospitalisations in Australia since pandemic (H1N1) 2009 is identified at 4,806.

[OCT 07] [New Zealand Pandemic Influenza \(H1N1\) 09 Swine Flu - Update 154](#)

- There are few changes to report and influenza activity including swine flu is now the same as would be expected at this time of year.
- As at midday today four people are in hospital with confirmed swine flu (H1N1) 09 or its complications – up from two last week.
- The cumulative total of people in New Zealand who have returned a positive laboratory test for swine flu (H1N1) 09 is 3174, up 11 from last week
- The number of deaths from Pandemic Influenza (H1N1) swine flu is unchanged from last week at 18. Some deaths are still being investigated by the Coroner.

Titles and page numbers for the individual articles are below.

H1N1 Flu and the Tartar Steppe. S209

The Strongest Prescription of All: A Week in the WOODS. S210-S215.

A Primer on Strategies for Prevention and Control of Seasonal and Pandemic Influenza. S216-S224

Estimating Influenza-Associated Deaths in the United States. S225-S230.

Pandemic Influenza and Pregnancy: An Opportunity to Reassess Maternal Bioethics. S231-S235.

The Open-Air Treatment of *PANDEMIC INFLUENZA*. S236-S242,.

Protecting Vulnerable Populations From Pandemic Influenza in the United States: A Strategic Imperative. S243-S248.

Pandemic Influenza and Pregnant Women: Summary of a Meeting of Experts. S248-S254.

Pandemic Influenza Planning: Addressing the Needs of Children. S255-S260

Protection of Racial/Ethnic Minority Populations During an Influenza Pandemic. S261-S270.

Pandemic Influenza Preparedness and Vulnerable Populations in Tribal Communities. S271-S278.

Pandemic Influenza Preparedness and Response Among Immigrants and Refugees. S278-S286.

Pandemic Influenza Preparedness and Response Among Public-Housing Residents, Single-Parent Families, and Low-Income Populations. S287-S293.

Preparing for and Responding to Pandemic Influenza: Implications for People With Disabilities. S294-S300.

Protecting Home Health Care Workers: A Challenge to Pandemic Influenza Preparedness Planning. S301-S307.

Pandemic Influenza and Farmworkers: The Effects of Employment, Social, and Economic Factors. S308-S315.

Role of the Primary Care Safety Net in Pandemic Influenza. S316-S323.

Effective Health Risk Communication About Pandemic Influenza for Vulnerable Populations. S324-S332.

Pandemic Influenza: Implications for Programs Controlling for HIV Infection, Tuberculosis, and Chronic Viral Hepatitis. S333-S339.

Pandemic Influenza and Jail Facilities and Populations. S339-S344.

What Should an Ideal Vaccine Postlicensure Safety System Be? S345-S350.

Screening for Influenza Infection in International Airline Travelers. S360-S362.

Changes in Prescribing of Antiviral Medications for Influenza Associated With New Treatment Guidelines. S362-S364.

Pandemic Influenza and Community Preparedness. S365-S371.

Enhancement of Influenza Surveillance With Aggregate Rapid Influenza Test Results: New Mexico, 2003–2007. S372-S377.

Disparities in Influenza Treatment Among Disabled Medicaid Patients in Georgia. S378-S382.

Effects of an Ongoing Epidemic on the Annual Influenza Vaccination Rate and Vaccination Timing Among the Medicare Elderly: 2000-2005. S383-S388.
