[NOV 18] [Immunization Program Open To All Ontarians On November 19](#)

[NOV 13] [Ontario Influenza Bulletin: Surveillance Week 44 \(Nov 1 – Nov 7\)](#)

Note : The Influenza Bulletin provides information based on the surveillance period from **November 1 to November 7, 2009**. Case counts from the previous week are submitted to the ministry by public health units every Tuesday.

For the surveillance period of November 1 to November 7, 2009 :

- Influenza activity in Ontario is similar compared to the previous week.
- Slightly fewer patients reporting influenza-like symptoms consulted sentinel physicians this week than the previous week.
- The rate of influenza-like illness (ILI) in patients seen by sentinel physicians continues to be above the average rate expected at this time of year.
- 15 health units reported widespread influenza activity for the current reporting week. Ten health units reported localized influenza activity and 9 health units reported sporadic influenza activity.
- There are 7,118 confirmed cases of H1N1 flu virus reported through the integrated Public Health System (iPHIS).

Bi-weekly and cumulative number of deaths due to Pandemic (H1N1) 2009, by province/territory, Canada, as of 17 November, 2009, 11h00 EDT

| Province / Territory | Deaths | |
|--------------------------------------|--|------------|
| | New Deaths reported (from November 10, 2009 to November 12, 2009, 11h00 EDT) | Cumulative |
| British Columbia | 6 | 29 |
| Alberta | 0 | 20 |
| Saskatchewan | 3 | 8 |
| Manitoba | 0 | 8 |
| Ontario | 0 | 61 |
| Quebec | 23 | 58 |
| New Brunswick | 2 | 2 |
| Nova Scotia | 1 | 3 |
| Prince Edward Island | 0 | 0 |

| Bi-weekly and cumulative number of deaths due to Pandemic (H1N1) 2009, by province/territory, Canada, as of 17 November, 2009, 11h00 EDT | | |
|--|--|------------|
| Province / Territory | Deaths | |
| | New Deaths reported (from November 10, 2009 to November 12, 2009, 11h00 EDT) | Cumulative |
| Newfoundland and Labrador | 2 | 7 |
| Yukon | 0 | 1 |
| Northwest Territories | 0 | 0 |
| Nunavut | 0 | 1 |
| Total | 37 | 198 |

[NOV 13] [Summary of FluWatch Findings for the Week ending November 7, 2009](#)

- Nationally, there was a considerable increase in the influenza activity level reported this week with a proportion of positive influenza tests of more than 38%, the national ILI consultation rate of almost 100 per 1,000 patient visits, 25 regions reporting widespread activity and over 750 influenza outbreaks reported. This increased activity occurred in almost all provinces and territories.
- The Pandemic (H1N1) 2009 strain accounted for nearly 100% (99.8%) of the positive influenza A subtyped specimens.
- The intensity of Pandemic (H1N1) 2009 in the population was high with 1,324 hospitalizations and 35 deaths reported this week. Hospitalized cases were reported in all provinces and territories that sent the weekly data² except MB and NU while the deaths were from all P/T except NB, PE, NT and NU. From August 30 to November 7, 2009, a total of 2,295 hospitalized cases including 317 cases admitted to an intensive care unit (ICU) (13.8%) as well as 59 deaths had been reported. Numbers of new deaths were four times higher than last week.
- So far, the proportion of severe cases (ICU admissions and deaths) among all hospitalized cases was lower than in the period up to August 29, 2009.
- The activity levels reported during the previous weeks were even higher than the peak period of the first wave (e.g. the three first weeks of June, 2009).

[NOV 13] [Weekly FluView Map and Surveillance Report for Week Ending November 7, 2009](#)

During the week of November 1-7, 2009, influenza activity remained high in the United States as reported in FluView. Flu activity is widespread in 48 states. Nationally, visits to doctors for influenza-like-illness declined slightly from last week, but are still very high. Flu-related hospitalizations and deaths continue to increase and are very high nation-wide compared to what is expected for this time of year.

[NOV 12] [University of Pittsburgh Medical Center \(UPMC\) Center for Biosecurity: Where Does H1N1 Influenza Information Come from? An Overview of Influenza Surveillance in the United States](#)

Center for Infectious Disease Research and Policy

[NOV 17] [WHO says no virus mutation in Ukraine](#)
The World Health Organization (WHO) said today that preliminary tests reveal no significant changes in pandemic H1N1 viruses taken from patients in Ukraine. The WHO said that genetic sequencing done in Britain and the US on 34 samples shows that the virus is similar to the one used to make novel H1N1 vaccine, reconfirming the vaccine's efficacy.

[NOV 17] [Novartis vaccine may protect with half the dose](#)
Novartis announced today that US clinical data suggest that half of the company's currently approved unadjuvanted pandemic H1N1 vaccine dose was protective in adults. The trials involve about 4,000 people. The company said it was discussing with US regulators whether reducing the antigen could stretch the vaccine supply. Novartis also said a trial of its MF59-adjuvanted pandemic vaccine showed a single dose was protective in children ages 3 to 8 and adults.

[NOV 17] [Study: H1N1 doesn't readily infect poultry](#)
US Department of Agriculture researchers report that the pandemic H1N1 virus does not easily infect poultry or spread among them. The researchers inoculated chickens, turkeys, ducks, and quail with the virus, they wrote in *Emerging Infectious Diseases*. Most of the birds showed no sign of infection; some quail were infected but did not pass the virus to other quail. The authors note that two turkey flocks in Chile were infected earlier this year, but those may have been isolated events.

[NOV 17] [Spain, Greece start vaccinating](#)
Health officials in Spain and Greece said both countries launched their pandemic H1N1 vaccine programs yesterday, Agence France-Presse (AFP) reported. Spain bought 37 million doses and is giving first priority to high-risk groups, including pregnant women and health workers. Greece has 700,000 initial doses and is

targeting health workers and others in high-risk jobs. Next week's priority group will include pregnant women and people with underlying conditions.

[NOV 17]

[FDA grants emergency use for 2 rapid H1N1 tests](#)

The US Food and Drug Administration (FDA) recently authorized emergency use of two rapid tests for detecting novel H1N1 flu: ELITech's Molecular Diagnostics 2009-H1N1 Influenza A Virus Real-Time RT-PCR and Roche's RealTime Ready Influenza A/H1N1 Detection Set. The tests are designed for respiratory specimens, such as nasal swabs, taken from symptomatic patients. The FDA previously approved six other pandemic flu tests for emergency use.

[NOV 17]

[Canada's public health offerings nicked by H1N1 efforts](#)

Diverse public health programs in Canada, such as support groups and food inspections, are being postponed or suspended as officials redirect staff to H1N1 vaccination efforts, a plan that has been in the works for months, according to a Toronto *Globe and Mail* story. Health authorities in several provinces have postponed non-flu vaccination programs and travel clinics, while others have limited the impact on public health programs by employing student or retired nurses.

[NOV 17]

[China, WHO plan Beijing flu research center](#)

The WHO and China have agreed to open an influenza research center in Beijing to identify and share knowledge about new strains, officials announced today. Approval to open the center was given last week, when Chinese health officials met with WHO assistant director-general Keiji Fukuda. If the laboratory is designated a WHO collaborating center as planned, it would join a group of such labs in Atlanta, London, Tokyo, and Melbourne.

- [NOV 16] [Regional Update. Pandemic \(H1N1\) 2009 \(published Nov 16\)](#)
- Influenza-like illness activity remained above what is expected for this time of year in Canada and the United States; in Mexico, it surpassed the level that was observed during the first wave of the pandemic
 - Caribbean countries reported mostly unchanged trends but high intensity of acute respiratory disease this week
 - Central America continues to report overall decreasing trends in acute respiratory disease
 - Most of South America had stable or decreasing trends of acute respiratory disease, with the exception of Colombia and Peru, which reported an increasing trend
 - Venezuela reported that the outbreak of acute respiratory illness in the Yanomami communities has ended
 - A median of 99.9% of subtyped influenza A viruses were pandemic (H1N1) 2009
 - 294 new confirmed deaths in eight countries were reported; in total there have been 4,806 cumulative confirmed deaths
