[ONGOING] "H1N1 and Pregnancy: Key Considerations for Vaccination and Management" : Online learning program for health professionals

mdBriefCase, in collaboration with the Public Health Agency of Canada and the Society of Obstetricians and Gynaecologists of Canada, has developed an online learning program for health professionals on H1N1 immunization and pregnancy.

The English version is now available. The French version will be posted on December 3rd.

To access the program:

[DEC 04] [Ontario Influenza Bulletin Surveillance Week 47 \(November 22, 2009–November 28, 2009\)](#)

For the surveillance period of November 22 to November 28, 2009 :

- Influenza activity in Ontario was lower compared to the previous week.

- Fewer patients reporting influenza-like symptoms consulted sentinel physicians this week than the previous week.
- However, the rate of influenza-like illness (ILI) in patients seen by sentinel physicians continues to be above the average rate expected at this time of year.
- No health units reported widespread influenza activity for the current reporting week. Six health units reported localized influenza activity and 22 health units reported sporadic influenza activity.
- There are 8,538 confirmed cases of H1N1 flu virus reported through the integrated Public Health System (iPHIS).

- [DEC 10] [NIAID Trial of 2009 H1N1 Influenza Vaccine Enrolling HIV-Positive Adults](#)
Adults with HIV infection are enrolling in a NIAID-sponsored clinical trial of 2009 H1N1 influenza vaccine to determine the optimal dosage of 2009 H1N1 vaccine for people with suppressed immunity caused by HIV/AIDS.
- [DEC 08] [The Severity of Pandemic H1N1 Influenza in the United States, from April to July 2009: A Bayesian Analysis](#)
Accurate measures of the severity of pandemic (H1N1) 2009 influenza (pH1N1) are needed to assess the likely impact of an anticipated resurgence in the autumn in the Northern Hemisphere.
- [DEC 08] [New York Autopsies Show 2009 H1N1 Influenza Virus Damages Entire Airway](#)
In fatal cases of 2009 H1N1 influenza, the virus can damage cells throughout the respiratory airway, much like the viruses that caused the 1918 and 1957 influenza pandemics, report researchers from the National Institutes of Health (NIH) and the New York City Office of Chief Medical Examiner.
- [DEC 07] [NIAID Clinical Trial of Pregnant and Non-Pregnant Women to Compare Responses Begins Recruitment](#)

Center for Infectious Disease Research and Policy

- [DEC 10] [Flu response frays state, local public health](#)
Responding to the H1N1 pandemic has stretched some already financially strapped public health departments to the point of pulling back in other areas such as testing for other infectious diseases and doing restaurant inspections, the *Wall Street Journal* reported today. For example, public health nurses in Maine have had to limit home visits only to major health threats. Both the House and Senate health reform bills contain new funds to strengthen public health infrastructure. [[Dec 10 Wall Street Journal report](#)]

- [DEC 10] [Return from break prompts flu rise at colleges](#)
After weeks of decline, flu activity increased at US colleges last week, and the American College Health Association (ACHA) attributes the uptick to students returning to campus after Thanksgiving break, the group said in an update yesterday. New cases were up 27% from the week before. The attack rate for the week ending Dec 4 was 5.2 cases per 10,000 students. No new deaths were reported. The percentage of students who have received the pandemic vaccine is still only 5%. [[ACHA report for week ending Dec 4](#)]

- [DEC 10] [Review finds high death rates in native groups](#)
Native Americans and Alaska Natives are four times more likely to die of pandemic H1N1 than any other group, officials reported today in *Morbidity and Mortality Weekly Report (MMWR)*. The review of flu deaths in 12 states could not explain why the flu strikes those groups harder, but the authors said reasons might include higher rates of chronic illnesses and socioeconomic conditions. [[Dec 11 MMWR report](#)]

[DEC 10]

[North Korea to accept flu drugs from South](#)

A South Korean cabinet minister said today that North Korea has agreed to accept aid in the form of oseltamivir to fight an H1N1 outbreak, the Associated Press (AP) reported. North Korean state media reported yesterday that the country had nine H1N1 cases. A spokesman for the South Korean minister said Seoul would send enough oseltamivir to treat 500,000 people. South Korea's oseltamivir offer was its first offer of humanitarian aid since President Lee Myung-bak took office in early 2008. [[Dec 10 AP story](#)]

[DEC 10]

[China reports clinical features of early cases](#)

A report on the clinical features of 426 early H1N1 cases in China was published yesterday in the *New England Journal of Medicine*. The patients, about a third of whom were identified at ports of entry, were isolated in 61 hospitals. Most had a mild illness, and about 60% received early oseltamivir treatment. Their mean age was 23, and the median incubation period was 2 days, with a range of 1 to 7 days. The median period of viral shedding, as indicated by lab testing, was 6 days. [[Dec 9 N Engl J Med report](#)]

[DEC 10]

[Israel to send vaccine to Gaza Strip](#)

Israeli authorities today promised to send 30,000 to 40,000 doses of H1N1 vaccine to the Gaza Strip, where six people have died of the virus in the past 5 days, Agence France-Presse (AFP) reported. The doses were supplied by the World Health Organization, said Col. Moshe Levy, head of the Israeli liaison office for Gaza. Israel previously provided 10,000 doses to the Palestinian territory. [[Dec 10 AFP story](#)]

[DEC 10]

[Early Mexican surveillance found two infected pigs](#)

Veterinary officials in Mexico today said that they detected the pandemic virus in two pigs at a farm in Queretaro state in late April after the virus was first confirmed in humans, according to a report from the World Organization for Animal Health (OIE). The farm had 360 pigs at the time. The infections were found during enhanced surveillance at pig farms throughout Mexico. Regular testing at the affected and surrounding farms has found no other cases. [[Dec 10 OIE report](#)]

[DEC 10]

[Cheetah at California preserve had H1N1](#)

The owner of a wildlife preserve near Santa Barbara said a pandemic H1N1 infection was detected recently in an 8-year-old cheetah after the animal was coughing and showing other flu symptoms, the *Press Democrat* reported. She believes the animal contracted the virus from a sick animal handler, not from the public. The cat has recovered. The case appears to be the first in an exotic animal and appears to be the one mentioned in a Nov 30 US Department of Agriculture report. [[Dec 9 Press Democrat report](#)]

[ARCHIVED] [Current overview and older updates from CIDRAP](#)

Health Protection Agency (UK)

[DEC 11]

[Positivity rates from virological sampling](#)

[DEC 10]

[Weekly Pandemic Flu Media Update](#)

- The consultation rate for flu-like illness in England from the Royal College of General Practitioners (RCGP) scheme has decreased slightly to 33.1 per 100,000 in week 49 compared to 8.6 in week 48. This remains above the English baseline threshold of 30/100,000.

- The estimated cases self referring to the National Pandemic Flu Service have shown decreases in all areas of assessments, authorisations and collections. This is across all age groups.
- Interpretation of data to produce estimates on the number of new cases continues to be subject to a considerable amount of uncertainty. HPA modelling gives an estimate of 11,000 new cases in England last week (range 6,000 to 24,000) which represents a significant decrease from the previous week.
This estimate incorporates data from National Pandemic Flu Service and GP consultations.
- The HPA estimates a cumulative total number of cases of 795,000 (with a range 380,000 to 1,665,000) since the pandemic began.
