

pH1N1 Flu Virus (Human Swine Influenza) Information Resources

Current as of December 14, 2009 at 4pm

Highlights

- On TV: [PBS to air pandemic documentary](#)
Public Broadcasting Service (PBS) will air an hour-long documentary titled "Anatomy of a Pandemic" tonight, though the date may differ in some areas. The program, narrated by Ray Suarez of PBS's "NewsHour," will cover what scientists know about the new virus and past pandemics, vaccine development, issues relating to vaccine safety, and how governments are addressing the pandemic. The network will also host an online ask-the-expert forum tomorrow.

[DEC 11] [Ontario Influenza Bulletin Surveillance Week 48 \(November 29, 2009–December 05, 2009\)](#)

For the surveillance period of November 29 to December 05, 2009:

- Influenza activity in Ontario was lower compared to the previous week.
- Fewer patients reporting influenza-like symptoms consulted sentinel physicians this week than the previous week.
- The rate of influenza-like illness (ILI) in patients seen by sentinel physicians has decreased to what is expected for this time of the year.
- No health units reported widespread influenza activity for the current reporting week. Four health units reported localized influenza activity and 20 health units reported sporadic influenza activity.
- Health units reported 95 new confirmed cases of H1N1 flu virus through the integrated Public Health System (iPHIS).

Public Health Agency of Canada (PHAC)

PHAC issues national updates on H1N1-associated deaths on Tuesdays and Thursdays at 4 pm, and will report regularly on any unusual outbreaks or clusters of illness.

[DEC 11] [FluWatch: November 29, 2009 to December 5, 2009](#)

- All FluWatch influenza indicators declined for at least the third consecutive week. The ILI consultation rate was even within the expected range for this time of the year.
- The Pandemic (H1N1) 2009 strain accounted for nearly 100% of the positive influenza A subtyped specimens this week.
- The intensity of Pandemic (H1N1) 2009 in the population was moderate. A decline has been experienced by all provinces and territories as indicated in the continued decreasing number of reported hospitalized cases (307 vs. 804), ICU admissions (83 vs. 139) and deaths (33 vs. 56) reported this week. Hospitalized

cases occurred in all provinces and territories (PTs) that reported this week except YT while the deaths were from all PTs except NB, PE, NT and NU. From August 30 to December 5, 2009, a total of 6,621 hospitalized cases including 1,041 (15.7%) cases admitted to an intensive care unit (ICU) as well as 292 (4.4%) deaths had been reported

- [DEC 10] [Deaths Associated with H1N1 flu virus in Canada](#)

Other US Sources

- [DEC 10] [NIAID Trial of 2009 H1N1 Influenza Vaccine Enrolling HIV-Positive Adults](#)
Adults with HIV infection are enrolling in a NIAID-sponsored clinical trial of 2009 H1N1 influenza vaccine to determine the optimal dosage of 2009 H1N1 vaccine for people with suppressed immunity caused by HIV/AIDS.
- [DEC 08] [The Severity of Pandemic H1N1 Influenza in the United States, from April to July 2009: A Bayesian Analysis](#)
Accurate measures of the severity of pandemic (H1N1) 2009 influenza (pH1N1) are needed to assess the likely impact of an anticipated resurgence in the autumn in the Northern Hemisphere.
- [DEC 08] [New York Autopsies Show 2009 H1N1 Influenza Virus Damages Entire Airway](#)
In fatal cases of 2009 H1N1 influenza, the virus can damage cells throughout the respiratory airway, much like the viruses that caused the 1918 and 1957 influenza pandemics, report researchers from the National Institutes of Health (NIH) and the New York City Office of Chief Medical Examiner.
- [DEC 07] [NIAID Clinical Trial of Pregnant and Non-Pregnant Women to Compare Responses Begins Recruitment](#)

Center for Infectious Disease Research and Policy

- [DEC 11] [New vaccine technologies on horizon but face roadblocks](#)
New ways of producing influenza vaccine that would free the process from long-standing problems are on the horizon, federal officials said today, but they added that scientific and regulatory hurdles will slow the products' movement past licensure and into the market.

- [DEC 11] [UK reports death rate similar to US's](#)
Pandemic H1N1 flu has killed fairly low numbers in the United Kingdom, British officials determined in a study published yesterday, but public health officials should stay vigilant and vaccination campaigns continue, according to a Reuters report. The

comprehensive analysis of data through Nov 8 revealed 26 H1N1 deaths in every 100,000 cases--a case-fatality rate (CFR) of 0.026%. Yesterday the CDC released figures indicating a US CFR of 0.021%.

[DEC 11]

[Aggressive steps may have worked for Japan](#)

Aggressive pandemic control steps such as hygiene measures, social etiquette, and quick testing and antiviral prescribing have helped Japan curb H1N1 better than other nations, according to a Bloomberg News story today that cites a Nov 13 WHO report. The report found a Japanese rate of 2 deaths per 100,000 H1N1 cases, considerably lower than other countries' published rates. Japanese doctors are advised to administer antivirals to anyone suspected of having flu, even if a rapid test is negative.

[DEC 11]

[China's outbreak may not peak for months](#)

Cases of novel H1N1 may not peak in China for several months, its health ministry said today, according to the Associated Press (AP). The ministry said that hundreds of millions of people returning home for the traditional Chinese New Year in late January and February may exacerbate the outbreak. The country has confirmed more than 100,000 cases but only 326 deaths. China's peak flu season, which could last till March, will be critical for flu control and prevention, a spokesperson said.

[DEC 11]

[China reports clinical features of early cases](#)

A report on the clinical features of 426 early H1N1 cases in China was published yesterday in the *New England Journal of Medicine*. The patients, about a third of whom were identified at ports of entry, were isolated in 61 hospitals. Most had a mild illness, and about 60% received early oseltamivir treatment. Their mean age was 23, and the median incubation period was 2 days, with a range of 1 to 7 days. The median period of viral shedding, as indicated by lab testing, was 6 days. [[Dec 9 N Engl J Med report](#)]

[DEC 11]

[NIAID to test vaccine in HIV-positive volunteers](#)

The National Institute of Allergy and Infectious Diseases (NIAID) is recruiting HIV-positive volunteers to test whether they need a larger-than-standard dose of H1N1 vaccine. People who have suppressed immunity are among the priority groups for H1N1 vaccination because of their risk of flu complications, but their HIV infection may dampen their response to the vaccine, the NIAID said yesterday. The trial volunteers will receive two doses of either 15 or 30 micrograms of antigen.

[ARCHIVED] [Current overview and older updates from CIDRAP](#)

Health Protection Agency (UK)

[DEC 11] [Positivity rates from virological sampling](#)

[DEC 10] [Weekly Pandemic Flu Media Update](#)

- The consultation rate for flu-like illness in England from the Royal College of General Practitioners (RCGP) scheme has decreased slightly to 33.1 per 100,000 in week 49 compared to 8.6 in week 48. This remains above the English baseline threshold of 30/100,000.

- The estimated cases self referring to the National Pandemic Flu Service have shown decreases in all areas of assessments, authorisations and collections. This is across all age groups.
- Interpretation of data to produce estimates on the number of new cases continues to be subject to a considerable amount of uncertainty. HPA modelling gives an estimate of 11,000 new cases in England last week (range 6,000 to 24,000) which represents a significant decrease from the previous week.
This estimate incorporates data from National Pandemic Flu Service and GP consultations.
- The HPA estimates a cumulative total number of cases of 795,000 (with a range 380,000 to 1,665,000) since the pandemic began.
